Magnesia Chrome Brick

1,Description of Magnesia Chrome Brick:

The product has excellent performance,good resistance to suddenly-changing temperature,antistrip performance,abrasion resistance, corrosion resistance, and is widely used in large cement rotary kilns, lime kilns, steel-making furnaces, chemical and building materials industrial furnaces. The product is shaped under a brick machine of more than 63 tons and fired at a high temperature of more than 1600 degrees Celsius.

2,Index of Magnesia Chrome Brick:

Item	JDMC-8A	JDMC-12	JZDMGe20
MgO %	80	60	60
Cr2O3 %	8	12	20
SiO2 %	1.2	3.2	1.2
Apparent porosity %	18	18	16
Bulk density g/cm3	3.0	3.0	—
Cold crushing strength Mpa	45	40	45
Refractoriness under load KD, °C	1700	1600	1750
Thermal Expansion(1400 °C×2h) %	1.6	1.4	—
Thermal shock resistance, times	30	25	25

ZIBO JINGGAN REFRACTORY IMPORT AND EXPORT CO.,LTD

3,Magnesia Chrome Brick characteristics:

1.8-20% Cr₂O₃ is added to magnesia brick, to form spinel mineral facies in magnesia and chrome sand during sintering and using at high temperature, which effectively improves the anti-spalling property of the product. At the same time, the chemical inertia of Cr₂O₃ is utilized to effectively improve the corrosion resistance of the product, thus improving the service life of the product.

2.Packaging:The use of shrink film packaging, improve the moisture-proof ability, so that the product isolates the damage of water content.

4,The products are divided into JDMC-8A, JDMC-12 and JZDMGE20 3 marks according to the content of Cr₂O₃,three kinds of products are applied to different parts of the kiln furnace to ensure the overall service life of the kiln furnace.

5,The main crystalline phase of the product is periclase and magnesia chromium spinel.the refractoriness under load is very high, that is, high temperature resistance, high density, compact structure, that is, high mechanical strength.Because the main crystalline phases of the products are periclase and magnesia-chromium spinel,therefore, the product has good anti-stripping performance and alkali slag corrosion resistance.products are widely used, such as large cement kilns, lime kilns, steelmaking furnaces, non-ferrous metallurgical smelting furnaces, etc.

6,Our company and factory produce and supply this kind of products with mature technology and quality assurance system, for the sake of users, strictly fulfill the contract in accordance with user requirements,delivery the goods with good quality.Our production is strictly controlled by process, and unqualified products will never be manufactured,product testing means are complete, product packaging is safe and firm, which is why users have been choosing us.

7.Good feedback of product use effect,the products have been exported to Japan, Russia, Australia, Mexico, Morocco

8.We are a professional supplier, who can provide customers with free product technology, use and other issues.

Do you want to find a professional supplier of refractory products?

Do you want to find a professional supplier of graphite electrodes?

Do you want to find a stable and credible supplier?

Then let's contact with jinggan company
